

KEEP YOUR ASPHALT AND YOUR BUDGET IN THE BLACK

GSB-78® is the best preservation material on the market. When applied, it becomes an integral part of the asphalt, sealing and protecting the binder and stopping the raveling process.

If added to well-constructed pavement, it can maintain serviceability, texture and integrity for decades.

ENGINEERED TO PROTECT

By adding natural asphalts and plasticizers, GSB-78® by ASI renews the binder in a pavement's top aggregate course. This restores the structure's ability to withstand oxidation and deterioration from sunlight, rain and snow.

SEALS

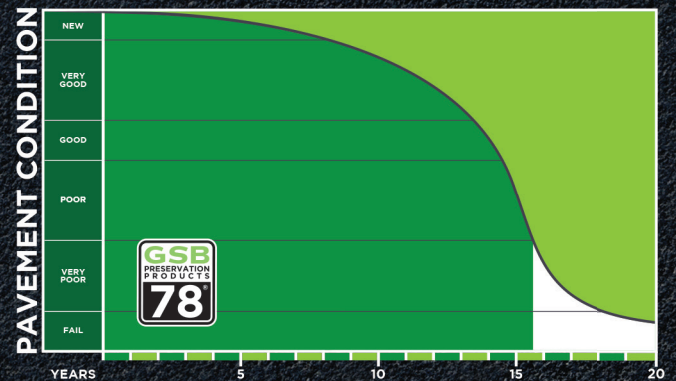

PENETRATES

REJUVENATES

GSB-78® seals pavement from the elements. With regular applications, the life of your surfaces can be extended almost indefinitely.

PRESERVE YOUR INVESTMENT

For just pennies per square foot, GSB-78® can increase the life of your asphalt. As it cures, GSB-78® binds aggregate and prevents the pavement from drying out. This seals and enhances the natural oils and resins necessary for surface flexibility.

ASI: A GLOBAL LEADER FOR 40 YEARS

Since 1969, our products have been used to maintain pavements all over the United States, Canada and Europe. GSB-78® is perfect for contractors as well as pavement managers, cutting both replacement and maintenance costs with one superior product.

EASY TO USE, EASY TO STORE

GSB-78® can be applied with standard distributor trucks or hand sprayers. Because it is not temperature sensitive, it has an almost indefinite storage life.

Pavement is ready for traffic within 1-2 hours of application.
